Compliance sheet — star-era

Everything a supplier qualification, a legal review or an export check usually asks about star-era 0.1.2, in one document.

1. Identity

Document	STAR-PKG-STAR-ERA-EN · v1.3 · 2026-10-16
Package	star-era
Version	0.1.2
Capability	star.time.earth-rotation
Maturity	RELEASED
Python	⩾3.9
Source commit	94fcf7c
Source	https://github.com/Andrea07072000/S.T.A.R.-/tree/main/packages/star_era

2. Licence and obligations

Apache License 2.0. You may use, copy, modify and distribute it, also commercially, and you receive a patent licence from the contributors. When you redistribute it: keep the LICENSE file and the copyright notices (and a NOTICE file, if a future version adds one), and state in modified files that you changed them. You may not use the S.T.A.R. name to endorse your product.

3. What it needs at run time

Nothing beyond the Python standard library: it works offline.

4. Integrity

SHA-256 fingerprints of the files published on this website. Check a downloaded file with:

```
python -c "import
hashlib,sys;print(hashlib.sha256(open(sys.argv[1],'rb').read()).hexdigest())" star_era-0.1.2-
py3-none-any.whl
```

FILE	SHA-256
star_era-0.1.2-py3-none-any.whl	c7c4bf09ca51f71b406534c0361dd8b8fbf3c0b76bef80a6674629de34bc3b47
star_era.py	b4a2b1a0cf05a226236016ca318e668d60e48248dd19790e1435860590b2e373
star_era-0.1.2-source.zip	bcfc59b5e4ccba9e17e81521543ded7e8da39c12ed4785ce6f6ca502350c2d41

5. What it does, and its limits

Earth Rotation Angle and IAU 2006 Greenwich Mean Sidereal Time from two-part Julian Dates over 1800-2200; reproduces the SOFA validation values to 1e-13 rad and agrees with ERFA and Skyfield within 4e-8 arcsec.

Mean sidereal time only: no equation of the equinoxes (apparent sidereal time), no polar motion, and UT1 is an input (UT1 - UTC comes from the IERS, not from here). For the 1982 GMST model see `star_sidereal`.

- `era_deg(ut1_day, ut1_frac=0)`: ERA in degrees in [0, 360), IERS Conventions (2010) eq. 5.15. Reproduces the SOFA validation value to 1e-13 rad.
- `gmst06_deg(ut1_day, ut1_frac, tt_day, tt_frac)`: ERA plus the IAU 2006 polynomial in TT (eq. 5.32). Reproduces the SOFA validation value to 1e-13 rad.
- Dates are two-part Julian Dates (any split); a nanosecond of UT1 stays visible. Measured on 1000 dates over 1800-2200: within 2.4e-8 arcsec of ERFA (ERA and GMST) and 3.6e-8 arcsec of Skyfield (ERA).
- Every function returns a finite angle in [0, 360) or raises `ValueError`: non-numeric, boolean, NaN or infinite input, a date outside 1800-01-01 to 2200-01-01.

6. Export, use and certification

The package is published and freely available. That usually takes software out of export-control lists, but not every use of it: read the page on space activities and export control before

using it in a controlled programme. It is not certified or qualified for flight; the evidence describes what was tested and how.

7. Citation and bill of materials

```
@software{cavazzini_star_era_0_1_2,
  author  = {Cavazzini, Andrea},
  title   = {{star-era}: Earth Rotation Angle and IAU 2006 sidereal time},
  version = {0.1.2},
  year    = {2026},
  url     = {https://andrea07072000.github.io/S.T.A.R.-/software/star_era/},
  note    = {Apache-2.0. Source: https://github.com/Andrea07072000/S.T.A.R.-, commit 94fcf7c}
}
```
