1. Identity

Document	STAR-PKG-STAR-MANEUVER-EN · v2.2 · 2026-11-02
Package	star-maneuver
Version	0.2.2
Capability	star.orbit.maneuver
Maturity	Beta (VERIFIED)
Python	⩾3.9
Source commit	dc09f61d
Source	https://github.com/Andrea07072000/S.T.A.R.-/tree/main/packages/star_maneuver

2. Licence and obligations

Apache License 2.0. You may use, copy, modify and distribute it, also commercially, and you receive a patent licence from the contributors. When you redistribute it: keep the LICENSE file and the copyright notices (and a NOTICE file, if a future version adds one), and state in modified files that you changed them. You may not use the S.T.A.R. name to endorse your product.

3. What it needs at run time

Nothing beyond the Python standard library: it works offline.

4. Integrity

SHA-256 fingerprints of the files published on this website. Check a downloaded file with:

```
python -c "import hashlib,sys;print(hashlib.sha256(open(sys.argv[1],'rb').read()).hexdigest())" star_maneuver-0.2.2-py3-none-any.whl
```

FILE	SHA-256
star_maneuver-0.2.2-py3-none-any.whl	08218b952fb6e504b60a26de717d44d874 03b47254c6bd18a2b13dfc2e9ff603
star_maneuver.py	c1908a47917dfdba2b61883b2d442ec547 e51c6bc4986e94bb71d4ef7d8dfc83
star_maneuver-0.2.2-source.zip	43d2bd1b4e40f5221117aadafa0b873150 1cce0ab826166497457566e4a9c55d

5. What it does, and its limits

Impulsive manoeuvre arithmetic between circular coplanar orbits and plane changes. Standard library only.

Finite burns, gravity losses, non-coplanar Hohmann with optimal plane-change split, any flight qualification.

- `vis_viva(r, a, mu)`; `hohmann(r1, r2, mu)` and `bielliptic(r1, r2, rb, mu)` return per-burn and total delta-v (km/s) and time of flight (s). Units: km, s, km/s, km^3/s^2 (default mu = 398600.4418, IERS Conventions 2010).
- `plane_change(v, di)` = 2 v sin(di/2); `combined_dv(v1, v2, di)` by the law of cosines (radians).
- Invalid input fails explicitly with `ValueError` (non-positive radii, rb < max(r1, r2), negative speed).

6. Export, use and certification

The package is published and freely available. That usually takes software out of export-control lists, but not every use of it: read the page on space activities and export control before using it in a controlled programme. It is not certified or qualified for flight; the evidence describes what was tested and how.

7. Citation and bill of materials

```
@software{cavazzini_star_maneuver_0_2_2,
  author  = {Cavazzini, Andrea},
  title   = {{star-maneuver}: Closed-form vis-viva and Hohmann orbital transfer engine},
```

```
  version = {0.2.2},
  year    = {2026},
  url     = {https://andrea07072000.github.io/S.T.A.R.-/software/star_maneuver/},
  note    = {Apache-2.0. Source: https://github.com/Andrea07072000/S.T.A.R.-, commit dc09f61d}
}
```
