2. Licence and obligations

Apache License 2.0. You may use, copy, modify and distribute it, also commercially, and you receive a patent licence from the contributors. When you redistribute it: keep the LICENSE file and the copyright notices (and a NOTICE file, if a future version adds one), and state in modified files that you changed them. You may not use the S.T.A.R. name to endorse your product.

3. What it needs at run time

Nothing beyond the Python standard library: it works offline.

4. Integrity

SHA-256 fingerprints of the files published on this website. Check a downloaded file with:

```
python -c "import hashlib,sys;print(hashlib.sha256(open(sys.argv[1],'rb').read()).hexdigest())" star_tdb-0.1.1-py3-none-any.whl
```

5. What it does, and its limits

TDB - TT for a TT Julian date, geocentre. Standard library only.

Topocentric terms (observer position), sub-microsecond accuracy, dates outside 1600-2200.

- `tdb_minus_tt(jd_tt) → seconds`, USNO Circular 179 (Kaplan 2005) eq. 2.6, 7 terms.
- Accuracy within 10 microseconds of the full Fairhead & Bretagnon series over 1600-2200.
- Outside 1600-2200 raises `ValueError` (no extrapolation beyond stated validity).

6. Export, use and certification

The package is published and freely available. That usually takes software out of export-control lists, but not every use of it: read the page on space activities and export control before using it in a controlled programme. It is not certified or qualified for flight; the evidence describes what was tested and how.

7. Citation and bill of materials
