Space activities and export controls

What S.T.A.R. does not do in space, and how export rules are respected.

Document ID	STAR-LEGAL-SPACE-EN
Version	1.3
Date	2026-10-16
Jurisdiction	Italy and the European Union
Language	English (an Italian version is published; for users in Italy the Italian text prevails)
Owner	Andrea Cavazzini
Legal review	not yet performed by a lawyer — requested before any paid service
Next review	2027-04-15 or at any change of service

Not a space operator

S.T.A.R. writes and checks software for analysis on the ground. It does not launch, operate, command or control any space object, and its software cannot send commands to a spacecraft. It therefore does not carry out the space activities that require an authorisation under the Italian space economy law (Law 13 June 2025, no. 89). Anyone who uses S.T.A.R. software in a space mission remains responsible for the authorisations, insurance and decisions of that mission.

Export controls and sanctions

- The public packages are general-purpose scientific software published openly; they implement textbook and published algorithms.
- S.T.A.R. does not accept, in any request or project, data or technology subject to export restrictions (for example under EU Regulation 2021/821 on dual-use items, or the US EAR and ITAR) unless the required authorisations exist and have been agreed in writing.
- No service is provided to persons or entities under EU or UN sanctions.
- Users are responsible for complying with the export and sanctions rules that apply to them.
