# Compliance sheet — star-euler

Everything a supplier qualification, a legal review or an export check usually asks about star-euler 0.1.0, in one document.

## 1. Identity

| | |
|---|---|
| Document | STAR-PKG-STAR-EULER-EN · v1.3 · 2026-10-16 |
| Package | star-euler |
| Version | 0.1.0 |
| Capability | star.attitude.euler |
| Maturity | RELEASED |
| Python | ⩾3.9 |
| Source commit | 94fcf7c |
| Source | https://github.com/Andrea07072000/S.T.A.R.-/tree/main/packages/star_euler |

## 2. Licence and obligations

Apache License 2.0. You may use, copy, modify and distribute it, also commercially, and you receive a patent licence from the contributors. When you redistribute it: keep the LICENSE file and the copyright notices (and a NOTICE file, if a future version adds one), and state in modified files that you changed them. You may not use the S.T.A.R. name to endorse your product.

## 3. What it needs at run time

Nothing beyond the Python standard library: it works offline.

## 4. Integrity

SHA-256 fingerprints of the files published on this website. Check a downloaded file with:

```
python -c "import
hashlib,sys;print(hashlib.sha256(open(sys.argv[1],'rb').read()).hexdigest())" star_euler-
0.1.0-py3-none-any.whl
```

| FILE | SHA-256 |
|---|---|
| star_euler-0.1.0-py3-none-any.whl | 5dbc1d9121406e48ca616a7442f8cb05c3171 55e370a7f4fe66ef078ee5ffb78 |
| star_euler.py | a43e4c7faa5b0fbc71e02a9076d389eda3741 6bf772118e52d512fb30f371201 |
| star_euler-0.1.0-source.zip | e8c32fe57bde766e64e1a5c3bdb4a1dac540d 9fd6a52ec01d0c8aa673bca8045 |

# 5. What it does, and its limits

Rotation matrix from three Euler angles and back for the six Tait-Bryan and six proper sequences, with one stated convention (active, intrinsic), gimbal lock detected and reported; agrees with SciPy and NAIF SPICE to 6e-16 on all twelve sequences.

No extrinsic (fixed-axis) sequences as a separate option: reverse the letters and the angles to get them. No angular rates or kinematic equations. Within about 1e-7 degrees of gimbal lock the first and third angles are not separable and only their combination is returned.

- Convention: ACTIVE, INTRINSIC rotations: `to_dcm("ZYX", a1, a2, a3) = Rz(a1) Ry(a2) Rx(a3)` (turn about Z, then about the new Y, then about the new X). This is SciPy's upper-case sequence; NAIF SPICE `eul2m` returns the transpose.
- `from_dcm(seq, R)`: middle angle in [-90, 90] (Tait-Bryan) or [0, 180] (proper), the others in (-180, 180]. At gimbal lock the third angle is returned as 0 and the first carries the whole rotation; `is_singular` reports it.
- Measured against SciPy and SPICE for all twelve sequences (720 regular cases, 24 at gimbal lock): matrices within 6e-16 (bit-identical to SPICE), angles within 4e-13 degrees, matrices rebuilt at gimbal lock within 6e-16.
- Every function returns finite floats or raises `ValueError`: a sequence that is not one of the twelve (lower case included: it is not guessed), non-numeric, boolean, NaN or infinite input, a matrix of the wrong shape, not orthonormal to 1e-9, or a reflection.

## 6. Export, use and certification

The package is published and freely available. That usually takes software out of export-control lists, but not every use of it: read the page on space activities and export control before using it in a controlled programme. It is not certified or qualified for flight; the evidence describes what was tested and how.

## 7. Citation and bill of materials

```
