Compliance sheet — star-lambert

Everything a supplier qualification, a legal review or an export check usually asks about star-lambert 0.1.3, in one document.

1. Identity

Document	STAR-PKG-STAR-LAMBERT-EN · v1.2 · 2026-10-15
Package	star-lambert
Version	0.1.3
Capability	star.orbit.lambert
Maturity	RELEASED
Python	⩾3.9
Source commit	94fcf7c

3. What it needs at run time

Nothing beyond the Python standard library: it works offline.

4. Integrity

SHA-256 fingerprints of the files published on this website. Check a downloaded file with:

```
python -c "import
hashlib,sys;print(hashlib.sha256(open(sys.argv[1],'rb').read()).hexdigest())" star_lambert-

5. What it does, and its limits

Zero-revolution solver for Lambert's problem (universal variables, Stumpff functions, Newton on z; Bate-Mueller-White / Curtis Algorithm 5.2). Standard library only.

- `lambert(r1, r2, tof, mu=398600.4418, prograde=True) → (v1, v2)`: velocities at r1 and r2 for a transfer of duration `tof`. Units: km, s, km/s, km^3/s^2.
- Never return an unconverged result: `RuntimeError` instead.
- Invalid input fails explicitly: `ValueError` for tof <= 0, zero position vectors, degenerate geometry (0 or 180 deg).

6. Export, use and certification

The package is published and freely available. That usually takes software out of export-control lists, but not every use of it: read the page on space activities and export control before using it in a controlled programme. It is not certified or qualified for flight; the evidence describes what was tested and how.
